87 Series Light

Bocci

DESCRIPTION

Soda water is used to trap air in a super heated glass matrix, which is vertically stretched and folded back onto itself between pegs numerous times. As the glass cools, the folding motion along the grain of the loop turns the entrapped air into microfilaments that give the piece a pearlescent optical quality. A low-voltage xenon or LED light source is introduced at one end of the loop casting light through the microfilaments and registering a gentle gradient.

DIMENSIONS

number and length of pendants are variable

FEATURES

- blown glass pendants
- pendant length may be adjusted on site
- available with different configurations and number of pendants
