# Superluna

Victor Vasilev

## **DESCRIPTION**

Making his debut with Oluce, Victor Vasilev proposes the SUPERLUNA lamp project that was inspired by a personal reflection on Vico Magistretti's work, with his ability to develop iconic shapes to enhance the potential of the light source. Now that LED lights have revolutionized the world of artificial light, making it possible to reinvent luminaires starting from their source, Vasilev proposes a family of lamps – available in floor and table versions – that originate from the desire to give a magical aura to an extremely technical light, by sizing the lamp parts starting with the LED footprint. The slender metal rod of the Superluna lamp conceals the electrical components and it hosts the light source: the LED opens out onto the stem in line with the semi-spherical shade that reflects its light by rotating on its own axis. In this way, the echo of the perpetual movement of celestial bodies is enhanced by the small luminous core contained in the structure of the lamp itself.

## **FEATURES**

- Finish: Black with Black stem or Anodized brass with Black stem

## **DIMENSIONS**

- 11" x 16.9"H
